

Evolve OS, third audit: is it usable?

9 October 2026. I ran the board against a copy of your real data and your real calendar, then had three reviewers go through it from three angles: getting around, the team working from it, and whether the logic holds up with real use. Live board: V149.

1. The short answer

It works, and the pieces you actually use day to day (the calendar, ticking blocks, capture, Needs You, the nightly notes) are solid. But on your real data it was noisy and said things that were not true, and three big parts (Money, Pipeline, Deliverables) sit empty because nothing feeds them. Gavin and Grace cannot really work from it yet. Today I fixed everything that was a plain bug. What is left needs your call, mostly because it changes words you see.

2. Fixed today, live now

What you would have seen	Now
Projects showed 27, including your routine blocks: Check the plan, Sales block, Weekly Ops Sync, Weekly Wrap, Evolve Session, Claude Academy.	Your 20 real projects. LOVC folds into Laurel Oaks Veterinary Center instead of showing twice.
Needs You had 23 items, mostly "Is Sales block in person or on a call?" for blocks only you are on.	9 items, each a real thing. The in person question only comes up when someone else is on it, and your answer covers the whole repeating series.
The rail said 21 blocked. Most were notes like "Him, on one reply" or "Nobody outside".	6 blocked, meaning held up by someone else. The same rule is now used on every screen, the project page and the kanban included.
Home said 14 live projects while Projects said 20. Six were quietly filed as delivered because a sentence contained "live" or "marked done". Bill Abell's unsigned agreement never reached Needs You because of it.	20 and 20. Bill Abell is back in Needs You.
Auburn Public Works showed twice: once as a project held up and once as a person gone quiet.	One line, the one with the person and the 37 days.
Every project was stored twice and a delete only removed one copy, so it came back.	The board saves to one copy and a delete removes both. The 16 leftover copies are still in your data until you say (section 7).
Editing an answer under Heard back was silently thrown away if there was one already.	It saves, and the old answer is kept.
Adding a project with the same name as one you have would wipe the old one's history.	It fills in the gaps and keeps the history.
Close the day listed routine and assistant blocks the count never counted, so Mark the rest as landed stamped them.	It lists exactly what it counts.
With costs entered but no cash on hand, Home would have said you were short from the first bill.	The Home line waits until cash on hand is set. Money still shows the full picture.
A deleted project stayed on screen until you reloaded.	It goes.

Every test suite passes, the click everything sweep runs clean at desktop and phone width (1,160 clicks each, no errors), and both builds are in the repo.

3. Getting around: what makes it hard

#	Problem	What I suggest
1	Inbox is not an inbox. It opens on a second copy of today's blocks. The 33 things waiting to be sorted start far down the page.	Inbox opens straight on what needs sorting. The day page lives on Board.
2	Three Today screens with different numbers: Home shows 3 blocks, Board 6, Inbox "6 still open", the top pill "9 to tick", Board's badge "3 to close" (that one counts days).	One definition of today's blocks used everywhere, and badges that say what they count, like "3 days to close".
3	Board opens on seven long paragraphs from the nightly checks. The calendar starts below the fold.	Collapse it to one line, like "6 checks ran, 2 things for you", with the rest a tap away.
4	The same project has two tab sets: 9 tabs on the side panel, 11 on the full page, with different names (Command and Home, Team and People, Activity and Project log).	One set of six: Overview, Work, Deliverables, Money, People, Log.
5	"Carried" means four different things in four places.	Keep carried for work you moved on. Use plain names for the rest (From yesterday, Catch up).
6	Close the day has five doors and lands on a screen titled Recap.	One Close today button on Board.
7	Labels that need decoding: Studio Reel, Go light, Command, Playbook, Dump, Catch, rocks, the calendar codes EV WF FA PE HE AH WS, "Held up by Him", and the hint "space jump here" (Space actually opens Capture).	Plain names. Real names instead of him and her.
8	"Things need you" appears four times on Home. Home and Board both claim to be the start.	Say it once. Home is the start, Board is the calendar.
9	Answering someone who is waiting on you has no home and ends at "Messages, not reachable from here".	A Waiting on you list on People, beside Who owes you, with Draft reply and Done.
10	Settings is one long scroll of 11 sections.	A jump list at the top.

All of these change words or layout you see, so none went in without you. I will ask you how you want to take them, one question at a time.

4. The team: can Gavin and Grace work from it?

Not yet. The Jackson, Gavin, Grace switch on Home only filters calendar blocks whose title has their name in it. Everything else stays yours. In Gavin's view today it still says Good evening, Jackson, 8 things need you, and your one thing about the court fines.

Problem	Why it matters
Anyone with the link sees everything: rent, late fees, the collection notice and bank balances in the nightly notes, your personal projects, personal and health calendars.	You chose to keep personal costs on the board, but this goes further than costs. The switch is not a lock, anyone can tap Jackson.
No next move has an owner. All 37 project records have the owner field blank, even when the text says "Get the budget number from Gavin".	Nobody can see what is theirs.
Hand off writes an ask the person never sees. Only you can close it.	Work handed over disappears from their side.
Ticks do not say who ticked. A shared block ticked by Gavin is ticked for you too.	You cannot tell who did what.

Problem	Why it matters
Tasks live only inside each project. There is no list of everything Gavin owns. Logiconova is not a person on the board at all.	No single this week, by whom list exists.
Grace's on site hours never show in her view, because of a filter order bug.	Small, easy to fix.

What would make it a real shared to do system: a My work view for each person (their blocks, tasks, next moves and asks, each with Done or Stuck, stamped with who did it). One This week list for the whole team, grouped by person, with unassigned items first. Owners on every next move. Logiconova as a contractor tied to Work Orders. A lock on the private parts. A strip on your Home showing what the crew changed since you last looked.

5. Where the data does not match what the board expects

What	Effect	Fix
The nightly money watch writes your invoices and bills into its notes, not as invoices or costs.	Money says \$0 owed while the notes name CR Photography's second half, HHC \$202.50 and WEC \$1,050.	Have the money watch write real invoice and cost records, or show its findings on Money labelled as from the nightly.
The nightly rewrites every project record each morning, replacing it whole.	Anything you set on the board (client, kind, archived, owner) is likely gone the next morning. This was true before today too.	The nightly should merge, not replace. That is a change to the scheduled task, which I will not touch without you.
Leads live as projects (Bill Abell, Harold Lloyd, Inline Lighting, FUSE). Pipeline is empty.	Win rate and booked work stay at zero, so the plan can never use real numbers.	A Mark won and Add to pipeline button on a project.
Waiting rows carry no project.	Most do not link, so a project page says nothing is out with anybody while someone is. I added a name match today; a real link is better.	The nightly writes the project on each waiting row.
Stage, next date and blocked by are written as sentences.	The stage track, the phases and By stage sit idle; every project says Phase not set.	The nightly writes a short stage word next to its sentence.
Work Orders are empty.	The signed Logiconova agreement puts no 30% start payment on the plan.	Enter the first Work Order when it exists.

6. What to build next, in order

#	What	Needs from you
1	The navigation cleanup in section 3.	Your OK on the words.
2	Owners on next moves, and a This week by whom list.	Your OK on the words.
3	My work view for Gavin and Grace, plus a lock on private parts.	Who can open the board (Brain plan decision).
4	Money gets fed: the money watch writes invoices and costs, or Money shows its findings.	Your OK to change the scheduled task.
5	The nightly merges instead of replacing, and writes a stage word, owner and project link.	Same.
6	Mark won on a project, so the pipeline and win rate become real.	Your OK on the words.

#	What	Needs from you
7	Money Engine M1: the pure money engine with its tests, set aside, the floor, the 13 week view, three dates, deposit schedules.	Nothing to start. Your numbers to be useful (cash, floor, open invoices, Gavin's overhead).
8	Money Engine M2 funnel and M3 turnaround lanes (now unblocked, the duplicate projects are handled).	Your capacity numbers.
9	Work Orders: deemed accepted after the review window and reminder, and the warranty date when there is no launch date.	Your OK on the words.
10	Lead Engine board work, Brain plan Publish 1 and 2, the rest of the master list.	As in the master list.

7. Still only yours

Clean up the 16 leftover duplicate project records and the LOVC stub, after a backup. Nothing is deleted until you say. Turn on Automatically approve on the Close the day nudge. Upload the new ledger to your Claude Project. Enter costs and cash on hand on Money. The lead engine decisions. Deploy the capture line worker with me.

8. Words I would change, waiting on you

Every rename in section 3, plus: Inbox badge and pill wording ("3 days to close", "5 past, not ticked"); Today's "time has gone" in orange on past blocks, which reads like being behind; and "Held up by Him" on project pages, which comes straight from the nightly.
